

THE BETTER BACKUP PLAN FOR YOUR SMALL BUSINESS

Carbonite Online Backup provides extra protection for your files and allows you to get those files back in the event of a data disaster—saving you time, money and stress. Since 2005, Carbonite has protected over 300 billion files—backing up more than 350 million files each day. Most importantly, Carbonite has restored nearly 20 billion files, that otherwise would have been lost forever.

HIGHLIGHTS

Automatic

With Carbonite, there's no hardware to install or maintain, no wires to connect, no tapes to deal with. You simply install the software, and Carbonite takes care of the rest. Your files are backed up automatically and continually in the background, so your backup stays up-to-date and your employees can stay focused on their jobs.

Convenient

Whether it's your email, client records or invoices, Carbonite makes restoring lost files fast and easy. If anything happens to any file, Carbonite finds it in your backup and restores it to its original location – in just a few simple steps.

Secure

Your backup is encrypted at all times, and stored on disk arrays that are immeasurably more reliable than the average consumer internal or external hard drive. Carbonite's state-of-the-art, guarded data centers protects your backup from theft, fire, water damage and anything else that can happen at your office.

Accessible

With Anytime, Anywhere Access, employees can access their data from any internet-connected computer, or from most smartphones using our free mobile apps—whether they're in the office, or on the road.

THE PLANS
